Objective:

The objective of slow-motion photography is to capture a sequence of images in such a way that when they are played back at a normal frame rate, they appear to be moving in slow motion. This allows for the viewer to see details and actions that would otherwise be missed at regular speed. Slow-motion photography is often used in film and television production, sports coverage, and scientific research.

Description:

The event started at 2:00 pm and proceeded until 4:00pm at activity room. The following topics were covered slow motion, slow motion photography, slow motion videography, cranking, time stretching, FPS(frame rate per second), How slow motion works, slow motion in action film, slow motion technique. The students were given hands on experience with live examples and samples.

Outcome:

- Understanding of the technical aspects of slow-motion photography, such as shutter speed, frame rate, and lighting.
- Ability to plan and execute a slow-motion shot, including choosing the right subject matter, camera settings, and shot composition.
- Skills in editing and post-production, including color grading, audio syncing, and adding special effects to slow-motion footage.

Overall, the goal of a slow-motion photography class is to equip students with the skills and knowledge they need to create high-quality slow-motion footage.
